

LISTEN

How Will You Know?

Knowing that a disaster has happened and what steps to take to keep you and your family safe, is critical. Santa Rosa County utilizes a variety of measures to provide warnings to our citizens:

Reverse 9-1-1

Reverse 911 is a high speed telephone notification system used to call homes and businesses to alert them during a variety of emergencies. Using a mapping system, Reverse 911 can call a section of the county that may be affected by an incident occurring in that area. A recorded message provides the listener with information about the emergency and recommended steps to protect their family from harm. The system recognizes answering machines and will leave a message. If you are receiving telephone service from an internet provider or utilizing a cellular phone as your primary service you should call our office at (850) 983-5360 Monday - Friday 8 a.m. - 4:30 p.m. to have your information put in the system.

Keeping the Media Informed

Santa Rosa County, through the public information officer, provides all information regarding safety of life and property to all media outlets that cover news in Santa Rosa County.

and/or texted to them when the information is updated with emergency or other information that may affect daily life in Santa Rosa County.

Cable Override

Mediacom provides Santa Rosa County the opportunity to interrupt regular cable broadcasts and provide emergency messages on channel 27.

The Weather Channel

The Weather Channel has agreed to display Santa Rosa County emergency weather related information on their text crawl, which is displayed at the bottom of the television screen.

Taminco/Air Products Sirens

Sirens are placed strategically throughout the Pace area to provide emergency alerts from the Taminco/Air Product Plant. These sirens may be used for hazardous material release or weather related incidents. Sirens are tested on the first Sunday of each month at 2:15 p.m.

NOAA Weather Radio

Emergency Management highly recommends the purchase of a NOAA weather radio. This radio will provide quick alerts for emergency situations such as tornadoes, severe thunderstorms and other weather related incidents that could develop quickly. This is a low cost item that could save your life!

511 or www.FL511.com for Free Traffic Information

When hurricanes, severe weather and other natural disasters threaten Florida, a free phone call to 511 provides travel information and roadway conditions. Be Prepared! Know Before You Go!

EAS

Emergency Alert System, or the alarm utilized by radio and TV stations, is a conduit for passing on life-saving weather information and emergency messages.
