

RESTORE Act Projects

Navarre Park Water Quality Enhancement

Project Description

This project is intended to provide stormwater treatment for the entire Navarre Park parking area to reduce fecal coliform bacteria entering the bay from the park area, intercept untreated stormwater by removing trash, debris, sediment, and hydrocarbon prior to entering Santa Rosa Sound.

Water quality enhancement will be completed by retrofitting the Center and West parking area through a combination of open detention system and bio-filtration units combined with vault storage and maintenance.
