AERIAL SHELL INFORMATION

The bigger the boom, the bigger the break! In the world of fireworks, the size of the shell determines the “climb time” and the size of the break.

We’ve illustrated a visual reference scale we use to calculate the specific timing of customized shows.

As shown, the climb and the size of the break of a 10” shell is substantially larger than that of a 3” shell. The larger the shell, the more robust the result!
